

Application- and recommendation for penergetic-p

General

If possible: Pre-treatment of the soil with 500 g penergetic-k compost treatment per ha in autumn and/or before the period of vegetation.

Potatoes

Seed dressing

20 g penergetic-p for 50 kg potatoes for seeding

Dry application: pre-mix penergetic-p with sand or stone meal and spray it over the seed potatoes.

Spraying

When germinating

1. Spraying 100 g / ha

When tillering

2. Spraying 100 g / ha

About. 2 – 4 weeks before harvesting

3. Spraying 150 g / ha

Sugar beet / carrots

Seed dressing

50 g penergetic-p for 100 kg seed. Dry application - mix with sand or stone meal and spread it over the seed.

Spraying

Seed-leaf: 2nd leaf and 4-8th leaf

1. Spraying 150 g / ha

Rapeseed

Seed dressing

30 g penergetic-p for 50 kg rapeseed. Dry application - mix with sand or stone meal and spread it over the seed.

Watering/spraying

When germination leaves are fully developed

1. Spraying 150 g / ha

When 1st threefold leaf germinates

2. Spraying 100 g / ha

3 weeks before harvesting

3. Spraying 100 g / ha

Vegetable (greens)

Seed dressing

30 g penergetic-p for 1 kg seed. Dry application - mix with sand or stone meal and spread it over the seeds. Water the seeds with 2 g penergetic-p / 10 l Water.

Bedding

Water with 2 g / 10 litre water. Duration: 24 h.

Watering

From the time of bedding until harvest:: in intervals of 14 days: 50 ml / 100 l water.
